

Synchronize identification data from all countries into a borderless blockchain 'passport'

Ethereum system to harmonize key identification data from all countries into a borderless portable blockchain 'passport'.

Trials ready markets subject to funding broken into market sophistication

- Countries with e-identifiers - Estonia, Singapore , HK, Japan, Korea, etc
- Countries with groups of countries - EU
- Countries - large population - US, BRIC, etc
- Countries with no standards - Many parts of Africa. We will set the standard!
- Other planets and star systems - We will set the standard ??!

Our system will also have sub-modules that will allow this decentralized identity ledger to seamlessly operate with other downstream concepts i.e. land ownership, relationships, financial matters, location advertising, arbitration, etc

Hence we also invest in other DSTs as well! Right now we have taken stakes in nearly 10 of the best DSTs participating

MGI numbers will be offered to 6 billion people on this planet.

Nobody will be denied an 'e-identity'.

Get your MGI number now
